

ANNA PAPP

Job Market Candidate - Columbia University

anna.papp@columbia.edu – 781-698-9714 – pappanna.github.io

Education	Columbia University , School of International and Public Affairs Ph.D. Sustainable Development , 2019 – 2025 (<i>expected</i>) Core PhD microeconomics and econometrics sequences in the economics department Harvard University B.A. Environmental Engineering, Minor in Computer Science, <i>Cum Laude in Field</i> , 2012 – 2016
Fields	Environmental Economics (Primary); Labor Economics (Secondary)
Fellowships & Awards	PERC Graduate Fellow, Bozeman, MT, 2023 Dean's Fellowship for Doctoral Students, Columbia University, 2019 – 2024
Teaching	Causal Inference Workshop (PhD), Columbia University, 2024 Analytics in Environmental Science Policy (Master's), Columbia University, 2020 – 2021 Microeconomics & Public Policy II (Master's), Columbia University, Teaching Fellow, 2021 Economic Development (Master's), Columbia University, Teaching Fellow, 2021
Employment	Alliance Bernstein, Equity Research Associate, 2016 – 2018
Research	Research Assistant, Columbia University, Prof. Douglas Almond, 2021 – 2023 Research Assistant, Yale SOM, Profs. Jason Abaluck and Kevin Williams, 2018 – 2019
Job Market Paper	Who bears climate change damages? Evidence from the gig economy This paper provides the first causal evidence that gig economy platforms enable consumer adaptation to climate change while shifting climate-related damages to workers. Across diverse markets and climates (UK, Germany, France, and Mexico), I leverage detailed transaction data and labor force surveys and exploit exogenous variation in daily maximum temperatures. On hot days relative to moderate days, I find an 8-16% increase in food delivery expenditures and a similar decline in dine-in restaurant spending, driven primarily by higher-income consumers. On these days, food delivery workers work 1.7 hours more on average, exposing them to material health risks. Yet, I find that their hourly wages do not increase, despite the flexibility of wages in this setting. This response to heat is unique to platform-based work. I show that worker beliefs are the main mechanism: platform workers believe that declining tasks – particularly during periods of peak demand such as hot days – deprioritizes them for future work. My findings raise broader questions about algorithmic fairness and highlight environmental equity concerns from unequal access to climate adaptation.
